

**Problem1 :**

Given a five digit integer, print the reverse of its digits.

Example:

Input = 10564 , output = 46501

**Problem2:**

Consider two points  $P(px,py)$  ,  $Q(qx,qy)$  and . We consider the inversion or **point reflection**,  $R(rx,ry)$  , of point  $P$  across point  $Q$  to be a **180 degree rotation** of point  $P$  around point  $Q$  .

Given  $P(px,py)$  and  $Q(qx,qy)$  Find  $R(rx,ry)$

Input :  $px,py,qx,qy$

Output :  $rx,ry$

Example :

If the user inputs  $px = 0$  ,  $py = 0$  .

$qx = 1$  ,  $qy = 1$  then the program shall get  $rx = 2$  ,  $ry = 2$ .
